

WHAT IS A LANGUAGE? A NEW PARADIGM

- An integrated system of meaning (a Meaning System) — *a state space that identifies all possible configurations of the Meaning System underlying a natural language, forms the substructure of the world's languages, and is the source of Meaning in words* **this is new!**
- Nature's solution by convergence to Consciousness — *IOW, it is the foundation upon which Consciousness is built* **not new, see Julian Jaynes, Origin**
- A psychophysically neutral domain that decomposes the ONE into the MANY **Dual Aspect Monism**
- An internal apparatus for Conscious Processing / Thinking **this is not new**
- The lens through which we 'see' the world (*i.e.*, an Organ of Perception) **again, not new — recognized by Jaynes in his book Origin**
- An internal compass for navigating in and through the world **this is new!**
